

Tuition Management System (TMS)

Tenant Admin — Detailed Role Specification

Scope: Institution level — one institution, one PAN/VAT, every branch under it

The Tenant Admin is the institution's owner/principal-level user. Nearly every policy that shapes how Branch Admins, teachers, and families experience TMS is configured here first — this role sets the rules everyone else operates inside.

1. Institution & Branch Setup

Function — Tenant Admin creates a new branch/center

System response: the branch is created with its own geofence radius, its own resource/classroom list, and inherits the tenant's fee, leave, and booking policies until a Branch Admin is assigned who can then run day-to-day operations within those policies (Branch Admins cannot alter the policies themselves — see Part B/D of the developer spec).

Function — Tenant Admin creates staff and assigns RBAC roles

System response: each staff account is created with exactly one of the defined roles (Branch Admin, Teacher, Accountant, Receptionist, Janitor/Cleaner) and, for teachers, one or more branch assignments; the system must reject a save that leaves a staff account with zero role or zero branch assignment where one is required.

2. Fee & Refund Policy Configuration

Setting	Options / rule
Fee types	Monthly recurring, one-time, installment-based, term-based — defined per course.
Discount types	Flat amount, percentage, sibling discount, scholarship.
Late fee / fines	Off by default; when enabled, requires an amount/percentage and a grace window.
Refund policy	Pro-rata, fixed deduction, or no-refund — tenant-wide default, one selection only.
VAT / PAN	Set once at tenant level; must appear on every generated invoice.

Function — Tenant Admin changes the refund policy after invoices already exist

System response: the change applies to withdrawals/cancellations processed after the change date; it must not retroactively recalculate already-settled refunds — store the policy value that was active at the time of each refund, not just a live reference to current settings.

3. Operational Thresholds (tenant-wide, branch-inheritable)

- Geo-attendance grace period per branch (minutes).
- Monthly petty cash cap per branch.
- Leave policy and approval chain.
- Appointment booking window (minimum advance hours).
- Escalation thresholds — days before an unresolved maintenance task escalates to admin.

Function — Tenant Admin edits any of the thresholds above

System response: the new value applies going forward only; in-flight approvals/requests already submitted under the old threshold keep evaluating against the threshold that was active when they were submitted, to avoid retroactively invalidating something a user already relied on.

4. Finance & Reporting

Function — Petty cash request reaches Level 2 (final) review

System response: Tenant Admin approves, rejects, or sends it back to the Accountant for revision with remarks attached; approval releases funds and updates that branch's monthly cap balance.

Report	Detail
Monthly P&L	Per branch and consolidated across all branches.
Yearly financial tracking	Month-by-month income vs. expense; year-on-year once multi-year data exists.
Ledger export	Double-entry CSV/PDF for external accountant reconciliation.
Financial forecast	AI-estimated fee income from current enrollment, vs. actuals, with variance highlighted.
Expense anomaly alerts	Rule-based flags: missing recurring entries, unusual salary/expense spikes.

5. HR Oversight

Function — Tenant Admin sets staff performance-score component weights

System response: the form must validate that attendance %, update-compliance %, feedback %, leave-compliance %, and task-completion % sum to exactly 100% before it can be saved — reject with a clear error otherwise, and show the current total live as the admin types.

Function — A staff exit reaches Tenant Admin for final settlement

System response: reviews the Branch-Admin-confirmed clearance checklist and the auto-calculated final salary (pro-rated pay + pending allowances – dues), then approves; approval deactivates the staff account (archived, never hard-deleted) and closes the exit record.

Function — A Long Sick Leave request reaches Tenant Admin

System response: this is always the second and final approval step — the request must already carry Branch Admin's first-level approval; Tenant Admin cannot approve a request Branch Admin hasn't cleared first.

Receives document/contract expiry alerts (30 days ahead) for every staff member institution-wide, not just their own branch.

6. Certificates, Calendar & Social Media

Function — Tenant Admin builds a master certificate template

System response: defines the layout, branding, and field set (student name, course, date, issuer signature block, etc.); this becomes the structure every branch must use — Branch Admins may only overlay their own branch name/logo on top, not change fields or layout.

Function — Tenant Admin publishes an institution-wide calendar event

System response: the event is pushed to every branch automatically and becomes read-only at the branch level — a Branch Admin cannot edit or delete it, only add branch-specific events alongside it.

Function — A Branch Admin submits a draft social media post for approval

System response: Tenant Admin reviews it and can approve (queues for scheduled publish), reject (returns to Branch Admin with remarks), or edit before approving; Tenant Admin also owns the tenant's connected

platform credentials (Facebook, Instagram, TikTok, LinkedIn) — Branch Admins never see or handle the actual API tokens.

Compiled from Lucaz Soft TMS PRD v2.0 (10 May 2026) and the TMS White Label MSA (effective 29 June 2026). This is a build/QA-ready checklist for this role: every function is paired with the exact system response — the validation, the success state, and the failure/edge-case behaviour.
