

Tuition Management System (TMS)

Branch Admin — Detailed Role Specification

Scope: Branch / center level — day-to-day running of one physical center

The Branch Admin is the on-the-ground manager. Almost every day-to-day exception — a leave request, an unpaid student who still needs to sit an exam, a broken projector — lands on this role first.

1. Staff Approvals

Function — A teacher/staff member submits a casual leave or early-out request

System response: Branch Admin approves or rejects it — this is the only and final approval step for these two leave types; there is no escalation to Tenant Admin.

— Rejection requires a reason field; an empty rejection must be blocked.

Function — A staff member submits a Long Sick Leave request

System response: Branch Admin gives first-level approval/rejection, then it forwards to Tenant Admin for final confirmation — Branch Admin's action alone does not finalize it.

Function — A petty cash request from the branch's Accountant needs review

System response: Branch Admin gives Level 1 approval/rejection before it goes to Tenant Admin for Level 2; Branch Admin cannot release funds directly — only advance or block the request.

2. Student Exceptions

Function — A student needs to leave the branch outside their normal pickup time

System response: Branch Admin logs the emergency departure (time, reason, who collected the student if applicable); this immediately pushes a notification to the parent and is permanently recorded on the student's record.

Function — A fee-blocked student needs temporary access (e.g. to sit an exam)

System response: Branch Admin grants a temporary override, but the form requires a mandatory logged reason — this cannot be a one-tap toggle. The override should be scoped (e.g. one day, one session) rather than silently unblocking the student indefinitely.

— The reason and the granting admin's identity must be visible on the student's fee-status history, not just in a hidden audit table.

Function — Branch Admin adds an administrative remark on a student's record

System response: the remark is saved with the admin's name and timestamp, and its visibility to parents is configurable per remark or per tenant policy — not everything an admin writes needs to be parent-visible by default.

3. Personalized Classes

Function — Branch Admin creates a personalized (1:1 or small-group) class

System response: defines the student(s), teacher, subject, schedule, and fee (per-session or fixed package). This creates an enrollment record independent of the student's regular course enrollment, with its own attendance and homework stream (see Part P of the developer spec).

4. Resource & Maintenance Oversight

Function — A daily resource log entry is flagged “Action Required” for a classroom

System response: the system auto-assigns a maintenance task to the pre-configured staff role; Branch Admin can reassign it to a different staff member if the default assignee is unavailable.

Branch Admin sees an escalated task (unresolved past the Tenant-Admin-configured number of days) surfaced on their dashboard for direct follow-up.

5. Branch Calendar & Certificates

Function — Branch Admin adds a branch-specific calendar event

System response: it layers on top of the tenant-wide calendar; Branch Admin cannot edit or remove any event the Tenant Admin pushed down.

Function — Branch Admin issues a certificate to a student

System response: selects the certificate type (completion, achievement, attendance, custom), and may only add branch-level details (branch name, address, logo) on top of the Tenant-Admin-owned master template — not change its fields or layout. The PDF is generated, logged against the student's certificate history, and the student/parent are notified.

6. Social Media Drafting

Function — Branch Admin creates a social media post draft

System response: can write text, attach media, choose target platform(s), and propose a schedule time, but cannot publish it directly — the post is submitted to Tenant Admin for approval. Branch Admin can edit or delete their own drafts at any point before Tenant Admin acts on them.

7. Dashboard

- Active student count for the branch, broken down by course/class.
- Today's attendance summary — teachers present/pending-update, students present/absent/blocked.
- Staff performance scores for branch staff only (not other branches).
- Pending approvals queue: leave, petty cash, exit-clearance checklist items.
- Escalated maintenance tasks.

Compiled from Lucaz Soft TMS PRD v2.0 (10 May 2026) and the TMS White Label MSA (effective 29 June 2026). This is a build/QA-ready checklist for this role: every function is paired with the exact system response — the validation, the success state, and the failure/edge-case behaviour.
