

## Tuition Management System (TMS)

# Teacher — Detailed Role Specification

---

**Scope:** Class level — their own assigned classes, sessions, and students

The Teacher role is built mobile-first: geo-attendance, class updates, and student records are all designed to be completed from the phone in the minutes around a class, not from a desktop at the end of the day.

### 1. Geo-Attendance — Mark IN

**Function — Teacher taps “Mark IN”**

System response: the app captures GPS and validates it against the branch geofence radius scheduled for the teacher at that moment.

- Inside radius + a class scheduled at that time → counted as present for that session.
- Inside radius + nothing scheduled → logged as “Unscheduled Presence,” visible in reports only, not counted toward attendance.
- Outside radius → Mark IN is blocked outright; no override exists for the teacher or an on-the-spot admin bypass in Phase 1.

### 2. Geo-Attendance — Mark OUT, Grace Period & Auto-Departure

**Function — Teacher taps “Mark OUT”**

System response: the departure timestamp is recorded against the current session.

**Function — Teacher steps outside the radius briefly between back-to-back sessions**

System response: if the time outside the radius is within the branch's configured grace period, nothing happens — no auto-departure, no notification.

**Function — Teacher's device exits the radius beyond the grace period without a Mark OUT**

System response: an auto-departure fires, timestamped to the last GPS position confirmed inside the radius; the Branch Admin is notified immediately.

**Function — Teacher returns to the branch after an auto-departure and taps Mark IN again**

System response: a fresh IN stamp is created and the session resumes; every stamp (IN, OUT, AUTO-OUT, RE-IN) stays visible in the teacher's own attendance history — nothing is silently merged or hidden.

### 3. Mandatory Daily Class Update

**Function — A session ends with complete IN/OUT stamps**

System response: the session is not auto-confirmed — it sits as “Present — Update Pending” until the teacher submits the daily class update (what was covered, any issues, homework given). Missing this triggers an automatic reminder.

### 4. Student Attendance

**Function — Teacher opens the class roster to mark attendance**

System response: marks each student present/absent.

- A fee-blocked student cannot be marked present — the option is disabled in the UI, not just discouraged.

- A student on approved leave for that date is already pre-marked “Absent (Excused)” — the teacher doesn't need to (and shouldn't casually be able to) overwrite that without an explicit reason.

## 5. Homework & Results

### Function — Teacher assigns homework to a class

System response: it auto-distributes to every currently-enrolled student in that class; students see it immediately in their app.

### Function — Teacher enters test/exam scores for students

System response: scores feed directly into that student's performance trend, class-average comparison, and strong/weak-subject analysis (see Part Q of the developer spec) — there is no separate manual step to “publish” the analytics.

## 6. Leave & Own Records

- Requests casual leave, early-out, or long sick leave, and can see their own running leave balance at any time.
- Views only their own performance score breakdown (attendance rate, update compliance, student/parent feedback, leave compliance) — never another teacher's score.
- Views reports scoped to their own assigned classes only.

## 7. Multi-Branch & Personalized Classes

### Function — A teacher is assigned to more than one branch

System response: their Mark IN geofence check validates against whichever branch they're scheduled at for that specific time slot that day — not a single fixed home-branch radius.

### Function — Teacher runs a personalized (1:1/small-group) session

System response: attendance and homework for that session are tracked in a stream separate from the teacher's regular classes, using the same geo-attendance rules.

Teacher can add a per-student remark after any session (regular or personalized); it's visible to admin and, subject to tenant visibility settings, to the parent.

---

Compiled from Lucaz Soft TMS PRD v2.0 (10 May 2026) and the TMS White Label MSA (effective 29 June 2026). This is a build/QA-ready checklist for this role: every function is paired with the exact system response — the validation, the success state, and the failure/edge-case behaviour.
