

Tuition Management System (TMS)

Student — Detailed Role Specification

Scope: Their own enrolled courses — consumed primarily via the mobile app

The student-facing side of TMS is read-mostly: a student can see everything about their own academic and fee record in real time, but almost nothing here is editable by the student themselves.

1. Academics

Function — Student opens the app's home/dashboard

System response: sees today's timetable across every course they're enrolled in (regular, music, short/long-term, personalized — merged into one view), plus any pending homework due soon.

Function — A teacher enters a new test score for the student

System response: it appears in the student's results view immediately, along with an updated trend line (improving/declining) and how it compares to the class average for that subject.

Sees their own strong and weak subjects, derived from average scores across multiple tests — this is a read-only insight, not something the student can edit or dispute in-app.

2. Attendance & Identity

- Has a digital student ID inside the app, usable for identification at the branch.
- Sees their own attendance record as marked by the teacher for each session — present, absent, or absent (excused) if on approved leave.
- If fee dues have triggered a block, the app clearly shows a “Blocked” status and what's owed — not just a vague error when trying to do something.

3. Fees & Payment

Function — Student opens the fees/payment section

System response: sees a payment calendar with upcoming due dates colour-coded (upcoming / due soon / overdue), the itemized invoice for the current billing cycle (dues, discounts, fines, net payable), and that cycle's Nepal Pay QR code for payment.

4. Certificates & Calendar

Function — Admin issues a certificate to the student

System response: the student gets a notification and can download the PDF from their certificate history at any time afterward — it doesn't expire from their view.

Sees the full academic calendar (holidays, exam periods, ceremonies, fee due dates) and an “upcoming events” widget on the dashboard.

5. Notifications

Trigger	What the student sees
Fee due / overdue	Push notification with amount and due date.
Attendance marked	Optional daily/weekly summary, per tenant settings.

Trigger	What the student sees
Homework assigned	Push notification with subject and due date.
Leave applied by parent	Confirmation once approved.
Appointment involving them indirectly	Not directly notified — appointments are a parent–teacher flow.
Certificate issued	Push notification with a link to download.

Compiled from Lucaz Soft TMS PRD v2.0 (10 May 2026) and the TMS White Label MSA (effective 29 June 2026). This is a build/QA-ready checklist for this role: every function is paired with the exact system response — the validation, the success state, and the failure/edge-case behaviour.
