

Tuition Management System (TMS)

Accountant — Detailed Role Specification

Scope: Finance — billing records and petty cash for the branch/institution

The Accountant role is deliberately built with no unilateral spending power: every petty cash request they raise must clear two separate approvals before a rupee moves.

1. Petty Cash Requests

Function — Accountant submits a petty cash request

System response: enters purpose and amount; the system checks the amount against the branch's remaining monthly cap (set by Tenant Admin, reset on the 1st) before allowing submission.

- A request that would exceed the remaining cap is rejected at submission, client-side and server-side — not just flagged for the approver to catch.
- Accountant cannot approve their own request at any stage — the approve/reject action must be hidden or disabled for the requester's own records even if their account also somehow has admin rights.

Function — A request is sent back for revision by Branch Admin or Tenant Admin

System response: it returns to the Accountant in a “Revision Requested” state with the reviewer's remarks attached; the Accountant edits and resubmits the same record — it does not restart as a blank request.

Function — Funds are released after Level 2 (Tenant Admin) approval

System response: the Accountant is notified and the request moves to “Awaiting Receipt” — there is no fixed deadline for submitting the receipt, but the record stays visibly open on the Accountant's dashboard until closed.

Function — Accountant submits proof/receipt of spend

System response: uploads the receipt image/document against the request; Branch or Tenant Admin then verifies it and manually closes the record — the Accountant cannot self-close it.

2. Billing & Invoicing

- Views and manages billing records: invoices generated per student per billing cycle, discounts applied, fines, and Nepal Pay payment status.
- Can apply discounts (flat, %, sibling, scholarship) to a student's invoice within the policy configured by the Tenant Admin — cannot invent new discount types.
- If a Nepal Pay webhook fails to confirm a payment automatically, the Accountant needs a manual “confirm payment received” fallback action, which should still require a reference/receipt number so it's auditable.

3. Reporting

Can view and export the double-entry ledger (CSV/PDF) and expense records relevant to their branch for reconciliation with the Tenant Admin's consolidated P&L — read-only access to consolidated tenant-wide figures unless Tenant Admin grants broader access.

Compiled from Lucaz Soft TMS PRD v2.0 (10 May 2026) and the TMS White Label MSA (effective 29 June 2026). This is a build/QA-ready checklist for this role: every function is paired with the exact system response — the validation, the success state, and the failure/edge-case behaviour.
