

Tuition Management System (TMS)

Janitor / Cleaner (Maintenance Staff) — Detailed Role Specification

Scope: Maintenance — classroom and facility upkeep, closing the loop on the daily resource log

This role exists to make sure the daily resource log (Part I of the developer spec) actually results in something getting fixed — someone has to receive the task and mark it done.

1. Task Assignment

Function — A resource log entry for a classroom is flagged “Action Required”

System response: if that classroom/resource type is pre-configured (by Tenant Admin) to route to this role, a maintenance task is auto-assigned to the relevant Janitor/Cleaner; Branch Admin can reassign it if needed.

2. Completing Tasks

Function — Janitor/Cleaner finishes the work for an assigned task

System response: marks the task done in the app; the system auto-logs the completion timestamp and the staff member's identity — a task cannot be marked done without both being captured.

Function — A task sits unresolved past the admin-configured escalation window

System response: it escalates automatically to the Branch/Tenant Admin; the Janitor/Cleaner still sees it as open on their own task list with an overdue indicator.

3. What This Role Needs

- A simple task list view: assigned tasks, classroom/location, description, due/overdue status.
- A single “Mark Done” action per task — no need for the fuller admin UI.
- No access to student, fee, or staff HR data.

Compiled from Lucaz Soft TMS PRD v2.0 (10 May 2026) and the TMS White Label MSA (effective 29 June 2026). This is a build/QA-ready checklist for this role: every function is paired with the exact system response — the validation, the success state, and the failure/edge-case behaviour.
