

## Tuition Management System (TMS)

# Parent / Guardian — Detailed Role Specification

**Scope:** Linked student(s) — one or more children enrolled at the institution

Parents get a supervisory view strictly scoped to their own child or children, plus the ability to initiate contact and manage leave/appointments on their behalf — privacy boundaries here matter as much as the features themselves.

### 1. Student Oversight

**Function — Parent opens their dashboard with multiple linked children**

System response: can switch between children (if more than one is enrolled); each child's timetable, attendance, invoices, and calendar are shown independently — never merged in a way that makes it unclear which child a given item belongs to.

**Function — A teacher or admin adds a remark, or a performance signal (upgrade/downgrade) is generated**

System response: it becomes visible to the parent according to whatever visibility setting the admin/institution has configured for that type of remark — not everything an admin writes internally is automatically parent-facing.

### 2. Communication (privacy-scoped)

**Function — Parent opens messaging to contact a teacher**

System response: the teacher list offered is limited to teachers actually assigned to their own child's classes — the parent cannot browse or message any other staff member. Threads are kept per student, so a parent with two children sees two separate conversation histories with the same teacher if that teacher teaches both.

### 3. Appointment Booking

| Rule                 | Detail                                                                                                    |
|----------------------|-----------------------------------------------------------------------------------------------------------|
| Booking window       | Minimum 24 hours' advance notice (tenant-configurable) — requests inside that window are rejected at s    |
| Individual vs. group | Individual appointments are a single slot with one teacher/admin; group meetings need every invited par   |
| Alternative time     | If the teacher/admin proposes a different time, it becomes its own linked negotiation — the original requ |
| Notifications        | Push + SMS at request, at approval/rejection/alternative-proposed, and at final confirmation.             |

### 4. Leave

**Function — Parent applies for planned/advance leave for their child**

System response: Branch Admin and the relevant teacher(s) are notified; once approved, the child's attendance for that date is auto-marked "Absent (Excused)" — the parent doesn't need to follow up with the teacher separately.

**Function — Branch Admin logs an emergency departure for the child**

System response: the parent gets an immediate push notification — this is the one leave-related event the parent doesn't initiate but is the first to be told about.

## 5. Fees

Views a payment calendar per child (colour-coded due dates) and can pay directly via the Nepal Pay QR shown against each invoice; sees the same itemized breakdown the student sees.

## 6. Certificates & Notifications

- Can download certificates issued to their child, with a notification when a new one is issued.
- Receives push + SMS for: fee due/overdue alerts, attendance summaries, and urgent/emergency notices — SMS specifically is reserved for the higher-urgency categories, not every minor update.

---

Compiled from Lucaz Soft TMS PRD v2.0 (10 May 2026) and the TMS White Label MSA (effective 29 June 2026). This is a build/QA-ready checklist for this role: every function is paired with the exact system response — the validation, the success state, and the failure/edge-case behaviour.
